DIGITAL LITERACY PROJECT

Name – Ayush Raj

Registration number – 25BAS10099

Branch – B. tech Aerospace Engineering

Year – 1st year

Course code – CSE0001

Date – 31st March, 2026

Introduction: -

In today's digital age, having strong digital literacy skills is essential for students to succeed academically and professionally. Digital literacy goes beyond basic computer usage and includes the ability to communicate effectively online, use digital tools productively, maintain a professional online presence, and stay safe from cyber threats.

This project focuses on developing practical digital skills through a series of tasks, including creating an infographic, building an online professional portfolio, practicing coding on learning platforms, understanding email etiquette, and analyzing cybercrime scenarios. Each task is designed to address a real-world aspect of digital literacy and help students become more responsible and effective users of technology.

By completing these activities, the project aims to bridge the gap between theoretical knowledge and practical application, ensuring that students are better prepared for academic challenges and future career opportunities in a technology-driven world.

Task 1: -

For creating the infographic, I used Canva, a free and user-friendly design tool that allows easy creation of visually appealing content using templates and drag-and-drop features. My design focuses on key aspects of digital literacy, including what digital literacy means, useful digital tools for students, and safe internet practices.

The infographic explains digital literacy as the ability to effectively and responsibly use digital technologies for learning, communication, and problem-solving. It also highlights commonly used tools such as Google Docs, Zoom, and online learning platforms that help students improve productivity. Additionally, it emphasizes safe internet practices like using strong passwords, avoiding suspicious links, and protecting personal information online.

One interesting aspect of creating this design was selecting the right icons and layout to present information clearly without overcrowding the slide. However, I found it slightly challenging to balance visual appeal with content clarity, as too much

information could make the design look cluttered. Overall, the task helped me understand how to communicate important digital concepts in a concise and visually engaging manner.

Task 2: -

For building my professional portfolio, I created and updated profiles on GitHub, LinkedIn, and Kaggle. Each of these platforms serves a different purpose in a student's learning and career journey. GitHub is mainly used for hosting and managing code repositories, allowing me to showcase my projects and track my development progress. LinkedIn is a professional networking platform where I have added my education details and will use it to connect with peers, mentors, and recruiters. Kaggle is a platform for data science and machine learning where I can practice with datasets, participate in competitions, and improve my analytical skills.

Over the next four years, I plan to actively use GitHub to upload my academic and personal projects, building a strong portfolio. On LinkedIn, I aim to grow my professional network and share my achievements and learning milestones. Through Kaggle, I intend to enhance my practical knowledge of data science by working on real-world datasets and challenges. Together, these platforms will help me develop technical skills and prepare for future career opportunities.

Task 3: -

For this task, I used HackerRank and Google Workspace tools to enhance both my coding and collaboration skills. On HackerRank, I created an account and completed a beginner-level challenge, which helped me practice basic programming concepts such as input/output handling and problem-solving logic. This platform is useful for improving coding skills through structured exercises and real-world problem scenarios.

In addition, I used Google Forms to create a "Digital Literacy Awareness Quiz" consisting of five questions, including both multiple-choice and short-answer types. The responses were automatically collected and linked to a Google Sheet, making it easy to view and analyze data. This demonstrated how online tools can be used for efficient data collection and collaboration.

These tools will be highly beneficial in my academic journey. Platforms like HackerRank will help me strengthen my programming skills and prepare for technical interviews, while Google Workspace tools will assist in conducting surveys, managing data, and collaborating on projects. Overall, this task improved both my technical and productivity skills.

Task 4: -

A common example of poor digital communication causing problems is when a student sends an email to a professor without a proper subject line or respectful tone. For instance, sending a message like “Send me notes ASAP” can be perceived as rude and unprofessional. This may lead to misunderstandings or even the professor ignoring the request altogether. Such situations highlight the importance of maintaining proper email etiquette and respectful communication. The issue could have been avoided by using a clear subject line, polite language, and a structured format, such as greeting the professor, explaining the request clearly, and ending with a proper sign-off. Effective digital communication ensures clarity, builds respect, and helps maintain positive professional relationships.

Task 5: -

One of the most surprising aspects while researching cybercrime was how easily people can be manipulated through social engineering techniques. Many scams do not rely on advanced technology but instead exploit human emotions such as fear, urgency, or trust. For example, in UPI fraud cases, victims often willingly share sensitive information because they believe they are interacting with a legitimate authority. This highlights that awareness is just as important as technical security measures. As a result of this research, one habit I will personally change is being more cautious while handling online payments and communication. I will avoid responding to unknown calls or messages related to financial matters and will always verify sources before taking any action. This will help me stay safer in the digital environment.

Conclusion: -

This project provided a comprehensive understanding of digital literacy and its importance in a student's academic and professional life. Through various tasks, I gained hands-on experience in using digital tools, building an online presence, practicing coding skills, and understanding the significance of professional communication and cybersecurity awareness.

Each task contributed to improving different skill sets, such as creativity through infographic design, technical skills through coding practice, and communication skills through email writing. Additionally, learning about cybercrime and safe online practices highlighted the importance of being cautious and responsible in the digital world.

Overall, this project helped me develop essential skills that will be valuable throughout my academic journey and future career. It has encouraged me to continuously improve my digital competence and use technology in a more effective and secure manner.
